*Corporate Social Responsibility
& Sustainability*
Edelman

James Pierce,
PhD Candidate
Living Environments Lab,
Carnegie Mellon

Nathalie Razo,
Research Assistant
National Disaster Preparedness
Training Center

Carey Stansbury,
Research Associate
Gravity Tank

Pamela Steiner,
Designer
Perkins + Will
Branded Environments

Transformative Education for Sustainable Innovation

Working in a sustainability-related career requires a holistic approach, an interdisciplinary toolkit, and the vision to transform systems. Developed over ten years, Foresight Immersion provides emerging leaders with the guiding methodologies, foundational knowledge, project experience, and network to create sustainable impact in an evolving landscape.

Providing a broad foundation, Immersion empowers its Fellows to grow, learn and engage, with:

- **Knowledge:** Learn methodologies to envision more effective solutions to multifaceted challenges. Deepen your knowledge of sustainability drivers, issues, and trends;
- **Projects:** Through working on projects that are grounded in real world constraints, gain the practical experience and understanding necessary to create sustainable innovation;
- **Experts:** Get insider perspectives on how to maximize your impact through frank conversations with experts "in the trenches." Speakers include business leaders, environmentalists, policymakers, academics, urban farmers, social innovators and researchers;
- **Career Development:** Develop career-relevant expertise, identify opportunities, and develop strategies for your next steps;
- **Skills:** Acquire the skills—including public speaking, visual thinking, and systems analysis—required to be an adept practitioner in the field.

Applications are now being accepted from current students to early professionals with a range of backgrounds, including the humanities, natural and social sciences, and design disciplines. Limited scholarships and payment plans are available.

June 18 - August 8, 2012 in Chicago, IL

Application Deadline April 2
